One system	Business-hours response	580 / month
Up to three systems	Extended-hours response	1,150 / month
Up to eight systems	Named engineer, priority response	2,300 / month
Set-up	Once. Free on a twelve-month agreement	1,450
ALSO AVAILABLE		
Claude Code for your developers	Priced on team size	quoted
Replacing an old system	Quoted individually	quoted

Training

One day, at your office or at Wemeet in Muscat, where we hold our regular AI trainings, working on your own files.

Every person picks the job they repeat most often. By the end of the day that job is running with AI, they have done it themselves twice, and they have written down what it used to cost in time and what it costs now.

WHAT YOU GET

- A saved setup that does their own repeated task, ready to use again tomorrow
- A one-page before-and-after, in their own numbers: minutes saved per task, hours saved per year
- A team list of every repetitive job in the room, with the three biggest at the top
- A 45-minute follow-up call, booked before they leave, for whatever breaks in the first fortnight

YOUR TIME

One day per person, plus a 30-minute brief from you beforehand and a 45-minute follow-up call two weeks later.

THE DAY

Morning	What these tools actually do, shown live on real work. When to use a chat and when to use an agent, which most teams get wrong. How to set the tools up so they already know your company before anyone types anything.
Afternoon	Each person names the job they repeat most. Each person builds it. Each person runs it twice on real work, with a facilitator beside them.
Last half hour	The team ranks the jobs that need more than a day to fix. That list is yours to keep.

PRICES

Team Training Day Up to 12 people OMR 3,500	Department Training Day Up to 25 people OMR 5,500 MOST BOOKED	Company Training Day Up to 40 people, two trainers OMR 8,500
---	--	--

Other formats: **Company-wide Rollout**, 41 people or more, run in groups of 25, OMR 210 per person · **Leadership Session**, up to 15 people, two hours, no building, OMR 1,900.

AI Audits

We look at how the work actually gets done, and come back with what to fix, what it is costing you now, and the order to do it in.

One Department

One week from start to handover. About six hours of your team's time.

You find out every job in that department that gets done the same way over and over, what each one costs you in hours per year, and which are worth fixing first.

YOU GET

- A list of every repeated job in the department, named by the people who do them
- The annual cost of each one, in hours and in money, using your own figures
- The ones worth fixing first, ranked by money recovered against effort
- A specification for the first one, detailed enough that anyone could quote it
- A twelve-month plan for that department
- A 90-minute walkthrough with you and the department head

OMR 2,200

THIS IS NOT FOR YOU IF

you have fewer than about ten staff. At that size the One Department audit covers your whole business, and you should pay OMR 2,200 rather than OMR 3,900.

Whole Business

Three weeks from start to handover. About ten hours of your team's time.

The same work across the whole company. You find out where AI pays across the business, how ready you are to do any of it, and what order to work through it over the next year.

YOU GET

- A ranked list of every opportunity across the business, with the annual money attached to each
- An honest read on the five things that decide whether any of it works: data, systems, people, rules, budget. Each scored, each gap ranked by what it is worth to close
- A specification for the first build
- A twelve-month plan, quarter by quarter
- A one-page summary for your board or owner
- A 90-minute walkthrough

Under 50 staff, one site

OMR 3,900

50 to 250 staff, or more than one site
or company · MOST BOOKED

OMR 5,800

Banks, insurers, healthcare,
government, or anything holding
sensitive personal data

OMR 8,700

THE AUDIT FEE COMES OFF THE BUILD

If you go ahead with a build or the Roadmap Retainer and sign within 60 days of the handover, the full audit fee is deducted from it. You are not obliged to build with us. The plan is yours. Take it to somebody else if you would rather, and some people do.

One audit for a UK sports business identified £81,000 a year in recoverable cost.

Builds

Once the audit is done we know exactly what we are building, so we quote a fixed price for a fixed scope and agree it in writing before any work starts. No hourly billing.

You own the finished system and the code. We document it and hand it over.

MOST FIRST BUILDS LAND BETWEEN **OMR 7,500 – 19,500**

Depending on how many systems it touches and how ready your information is. Larger programmes run higher, and the audit tells you which you are first.

OR WORK THROUGH THE ROADMAP MONTHLY **OMR 1,900** /mo

The Roadmap Retainer. We build the items in the order the audit set, and something new is working every month. Six-month minimum. The audit fee comes off it, same as a build. Managed AI, below, runs what is already live.

At Showcase Cinemas, weekly scheduling fell from forty hours to under two.

Managed AI

Once something is live, somebody has to watch it, fix it when it breaks, stop the bill creeping up, and keep it working as the tools change. That is this. It covers systems we built and systems somebody else built.

Your time: about two hours during set-up, then a 30-minute review each month.

WHAT YOU GET EVERY MONTH

- Monitoring, with an agreed response time when something goes wrong
- A monthly spending limit you set, and a warning before it is reached rather than after
- Checks that the system can only reach what it is supposed to reach
- A monthly report in plain language: what ran, what broke, what it cost, what improved
- An improvement pass that keeps accuracy climbing as the tools change, measured before and after

MONTHLY

One system

Business-hours response

OMR 580 /mo

Up to three systems

Extended-hours response

OMR 1,150 /mo

MOST BOOKED

Up to eight systems

Named engineer, priority response

OMR 2,300 /mo

Set-up: OMR 1,450 once. Free on a twelve-month agreement. Running more than eight systems? We will quote it properly rather than stretch a rate card to fit.

How we *work*

Fixed price, fixed scope. The fee is agreed in writing before we start. We do not bill by the hour and we do not run open-ended discovery.

The people who scope it build it. The same faces from the first call through to a running system.

You decide at every step. Every stage ends with a decision that is yours. You can stop after the audit.

Your data stays where you put it. Your information is stored and processed in the region you choose, in your own account. Nothing you send is used to train the model. Access is limited and time-limited. We put all of this in writing before we build anything, in a form you can hand to your compliance team.

ALSO AVAILABLE

Claude Code for your developers	Rolling out Claude Code properly across an engineering team: access, security, shared conventions, and a dashboard that shows whether it is actually making people faster. Priced on team size.
Replacing an old system	Getting off software nobody can maintain any more, without losing the business rules buried inside it. Always quoted individually.

PAYMENT

Training	Paid in full before the day
Audits	Half on signing, half at handover
Builds	Agreed in the contract, staged against delivery
Managed AI	Monthly in advance. Twelve-month agreement, or a three-month minimum with the set-up fee

Prices exclude VAT. VAT registration number [TRN]. Travel outside Muscat is charged at cost and quoted before you book.

Start free, *today*.
